

Declaration of Flammability Safety Compliance with UL 94V

Trencin, November 3, 2023

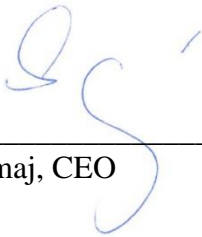

VOIPAC TECHNOLOGIES s.r.o. (Voipac) hereby declares that all of its products are compliant with the flammability classification UL 94 V-0 as per the certifications of manufacturers and suppliers of the components, for which this standard is applicable.

Unless specified otherwise, all the components used for Voipac products assembly meet the highest rating for the vertical burn V-0 of the standard UL 94. This ensures that in case of fire occurrence, the flame extinguishes itself within 10 seconds while no dripping is allowed.

The UL 94 certification serves as an important indication of plastic materials' acceptability for use as part of a device or appliance with respect to its fire risks. In addition to electrical safety, it also takes into consideration flammability, mechanical sources of danger and other attributes, all focused on making products safer. The component certification is thus an essential step toward a higher level of protection of the people and the environment.

The standard UL 94, the Standard for Tests for Flammability of Plastic Materials for Parts in Devices and Appliances, is now harmonized with IEC 60707, 60695-11-10 and 60695-11-20, and with ISO 9772 and 9773.

For and on behalf of
VOIPAC TECHNOLOGIES s.r.o.
